## Monaural BTL amplifier IC with built-in AGC (I<sup>2</sup>C bus-control correspondence)

### ■ Overview

AN12978A is the monaural BTL amplifier which contained the AGC circuit for clip prevention of a speaker output.

This IC performs a mode change by the I<sup>2</sup>C bus control system. (Standby function ON/OFF change etc.)

### ■ Features

- Selection by I<sup>2</sup>C bus control is possible in the on-level of AGC. (3-bit, 8-step)
- Selection by I<sup>2</sup>C bus control is possible in an attack/recovery time of AGC. (attack: 2-bit , recovery: 3-bit)
- The resistance and the capacitor of a detector circuit which were being used for the conventional AGC are unnecessary.
- In order to realize high efficiency of output power, it adopts CMOS power amplifier circuit.
- Built-in shutdown function.
- Built-in Gv-Switch.

### ■ Applications

- Audio amplifier for mobile, such as a cellular phone

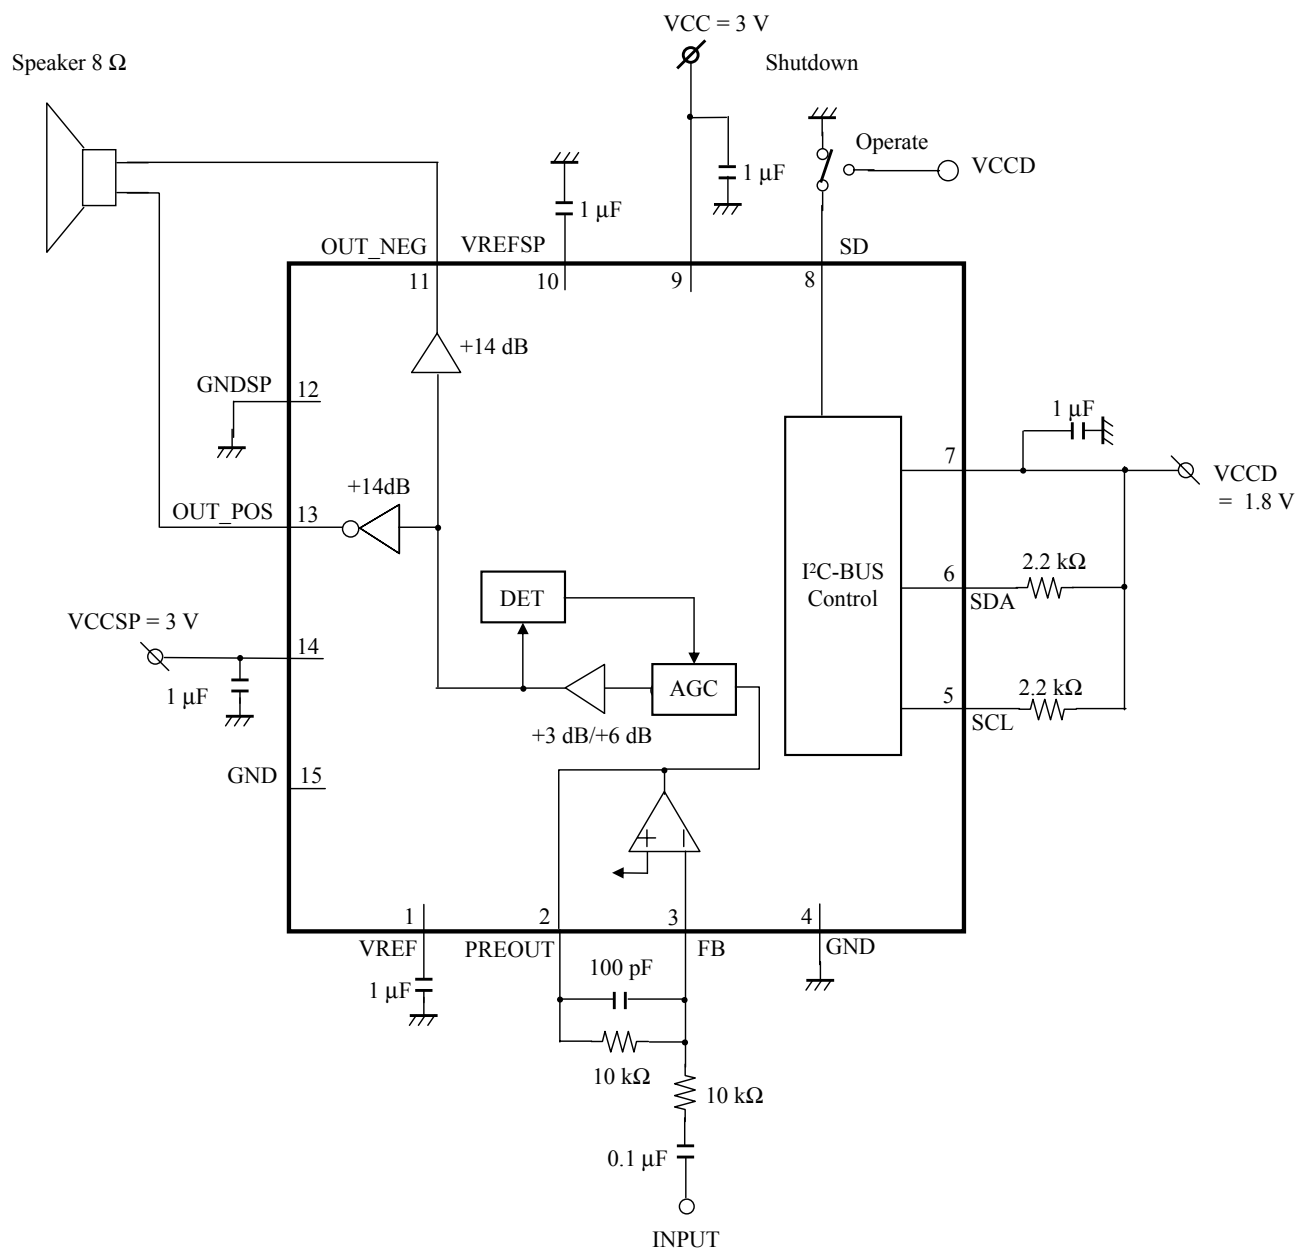

### ■ Package

- 15 pin Wafer level chip size package (WLCSP)  
Size: 2.0 mm × 2.0 mm (0.5 mm pitch)

### ■ Type

- Bi-CMOS IC

■ Application Circuit Example (Block Diagram)

- Note) 1. This circuit and these circuit constants show an example and do not guarantee the design as a mass-production set.  
 2. The threshold voltage at 8pin has the VCCD dependency.

## ■ Pin Descriptions

Pin No.	Pin name	Type	Description
1	VREF	Output	Reference Voltage Output
2	PREOUT	Output	Pre-amplifier Output
3	FB	Input	Pre-amplifier Negative Feedback Input
4	GND	Ground	Ground
5	SCL	Input	SCL Input on I <sup>2</sup> C-bus Control
6	SDA	Input / Output	SDA Input on I <sup>2</sup> C-bus Control
7	VCCD	Power Supply	Power supply for logic circuit
8	SD	Input	Shutdown Control
9	VCC	Power Supply	Power supply
10	VREFSP	Output	Reference Voltage Output for Speaker Amplifier
11	OUT_NEG	Output	Speaker Output (Negative Phase)
12	GNDSP	Ground	Ground for Speaker Amplifier
13	OUT_POS	Output	Speaker Output (Positive Phase)
14	VCCSP	Power Supply	Power supply for Speaker Amplifier
15	GND	Ground	Ground

### ■ Absolute Maximum Ratings

A No.	Parameter	Symbol	Rating	Unit	Note
1	Supply voltage	VCC	5.5	V	*1
		VCCD	3.6		
		VCCSP	5.5		
2	Supply current	I <sub>CC</sub>	—	A	
3	Power dissipation	P <sub>D</sub>	120	mW	*2
4	Operating ambient temperature	T <sub>opr</sub>	−20 to +70	°C	*3
5	Storage temperature	T <sub>stg</sub>	−55 to +150	°C	*3

Note) \*1: The values under the condition not exceeding the above absolute maximum ratings and the power dissipation.

\*2: The power dissipation shown is the value at T<sub>a</sub> = 70°C for the independent (unmounted) IC package without a heat sink.

When using this IC, refer to the • P<sub>D</sub> – T<sub>a</sub> diagram in the ■ Technical Data and use under the condition not exceeding the allowable value.

\*3: Except for the power dissipation, operating ambient temperature, and storage temperature, all ratings are for T<sub>a</sub> = 25°C.

### ■ Operating Supply Voltage Range

Parameter	Symbol	Range	Unit	Note
Supply voltage range	VCC	2.7 to 4.5	V	
	VCCD	1.7 to 2.6		*1
		1.7 to 3.3		*2
	VCCSP	2.7 to 4.5		

Note) 1. The values under the condition not exceeding the above absolute maximum ratings and the power dissipation.

2. \*1: The values under Fast mode.

\*2: The values under Standard mode.

■ Electrical Characteristics at VCC = 3.0 V , VCCD = 1.8 V , VCCSP = 3.0 V

Note) T<sub>a</sub> = 25°C±2°C unless otherwise specified.

## ■ Technical Data

### • I<sup>2</sup>C-bus Mode

#### 1. Write Mode

Two transmission messages (i.e., the SCL and SDA) are sent in synchronous serial transmission. The SCL is a clock with fixed frequency. The SDA indicates address data for the control of the reception side, and is sent in parallel in synchronization with the SCL. The data is transmitted in 8-bit, 3 octets (bytes) in principle, where every octet has an acknowledge bit. The following description provides information on the structure of the frame.

#### <Start Conditions>

When the level of the SDA changes to low from high while the level of the SCL is high, the data reception of the receiver will be enabled.

#### <Stop Conditions>

When the level of the SDA changes to high from low while the level of the SCL is high, the data reception of the receiver will be aborted.

#### <Slave Address>

The slave address is a specified one unique to each device. When the address of another device is sent, the reception will be aborted.

#### <Sub Address>

The sub address is a specified one unique to each function.

#### <Data>

Data is information under control.

#### <Acknowledge Bit>

The acknowledge bit is used to enable the master to acknowledge the reception of data for each octet. The master acknowledges the data reception of the receiver by transmitting a high-level signal to the receiver and receiving a low-level signal returned from the receiver as shown by the dotted lines in Fig.

The communication will be aborted if the low signal is not returned.

The SDA will not change when the level of the SCL is high except start or stop conditions are enabled.

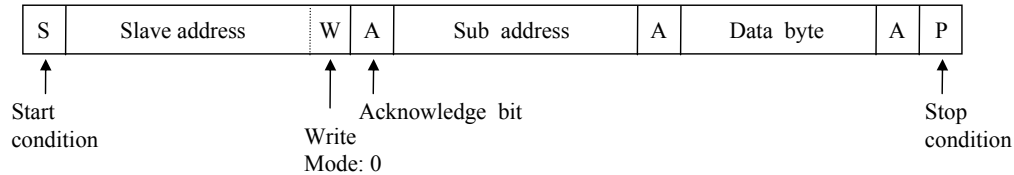

■ Technical Data (continued)

• Power supply and logic sequence

Note) The characteristics listed below are reference values based on the IC design and are not guaranteed.

The timing control of power-ON/OFF and each logic according to the procedure below should be recommended for the best pop performance caused in switching.

1. The sequence of the power supply and each logic

The basic procedure at the power-on

1. The power OFF condition  
Both the standby and the SP\_Save are in the ON condition.
2. Power ON
3. Standby Off
4. SP\_Save Off

The basic procedure at the power-off

1. The power ON condition  
Both the standby and the SP\_Save are in the OFF condition.
2. SP\_Save On (= Standby On)
3. Standby On
4. Power Off

After at least 20 ms has passed after the standby off, please off SP\_Save.

Please control Standby On to simultaneous with SP\_Save On, or the back.

Note) \*: This IC contains the pre-charge circuit. It is time until each bias is stabilized from Standby Off. It depends for this time on the capacity value linked to a reference voltage terminal (VREF and VREFSP), and the capacity value and resistance linked to an input terminal (IN). It is a recommendation value in a constant given in the example of ■ Application Circuit Example (Block Diagram).

2. The sequence of VCC and VCCSP and VCCD

This IC have not a standup and falling order in VCC and VCCSP.  
A standup and falling time of VCC and VCCSP recommend 1 or more ms.

**■ Usage Notes**

1. Please take notice in the use of this product that it might break or occasionally smoke when an abnormal state occurs such as SP output pin (Pin11, Pin13) – power supply pin short, SP output pin (Pin11, Pin13) – GND short, or SP output (Pin11, Pin13) -to-SP output-pin short (load short).
2. Please absolutely do not mount the IC in the reverse direction on to the printed-circuit-board.  
It damaged when the electricity is turned on.
3. Please do not make it open, because the open SD-pin (Pin8) is not fixed.

## Request for your special attention and precautions in using the technical information and semiconductors described in this book

- (1) If any of the products or technical information described in this book is to be exported or provided to non-residents, the laws and regulations of the exporting country, especially, those with regard to security export control, must be observed.
- (2) The technical information described in this book is intended only to show the main characteristics and application circuit examples of the products. No license is granted in and to any intellectual property right or other right owned by Panasonic Corporation or any other company. Therefore, no responsibility is assumed by our company as to the infringement upon any such right owned by any other company which may arise as a result of the use of technical information described in this book.
- (3) The products described in this book are intended to be used for standard applications or general electronic equipment (such as office equipment, communications equipment, measuring instruments and household appliances).  
Consult our sales staff in advance for information on the following applications:
  - Special applications (such as for airplanes, aerospace, automobiles, traffic control equipment, combustion equipment, life support systems and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.
  - Any applications other than the standard applications intended.
- (4) The products and product specifications described in this book are subject to change without notice for modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.
- (5) When designing your equipment, comply with the range of absolute maximum rating and the guaranteed operating conditions (operating power supply voltage and operating environment etc.). Especially, please be careful not to exceed the range of absolute maximum rating on the transient state, such as power-on, power-off and mode-switching. Otherwise, we will not be liable for any defect which may arise later in your equipment.
  - Even when the products are used within the guaranteed values, take into the consideration of incidence of break down and failure mode, possible to occur to semiconductor products. Measures on the systems such as redundant design, arresting the spread of fire or preventing glitch are recommended in order to prevent physical injury, fire, social damages, for example, by using the products.
- (6) Comply with the instructions for use in order to prevent breakdown and characteristics change due to external factors (ESD, EOS, thermal stress and mechanical stress) at the time of handling, mounting or at customer's process. When using products for which damp-proof packing is required, satisfy the conditions, such as shelf life and the elapsed time since first opening the packages.
- (7) This book may be not reprinted or reproduced whether wholly or partially, without the prior written permission of our company.
